

Amendments to the Specification:

Please make the following amendments to the specification.

Page 6, lines 21-27

In one preferred embodiment, the invention provides a rigid concrete form tube constructed from multiple sub-layers of material, wherein each said sublayer consists of a woven HDPE mesh disposed in between one or more layers of material selected from the group consisting of kraft paper, poly-propylene, and polyethylene. Similar results may be obtained with PP mesh. The kraft paper may be bonded to the mesh in a conventional manner according to the art, but it is particularly preferred that the paper is bonded to the mesh via an intermediate layer of poly-ethylene (PE).
